TITLE OF INVENTION: METHOD AND ARRANGEMENT FOR VARIABLY GENERATING CRYPTOGRAPHIC SECURITIES IN A HOST DEVICE

APPLN, TYPE	SMALL ENTITY	ISSUE FEE DUE	PUBLICATION FEE DUE	PREV. PAID ISSUE FEE	TOTAL FEE(S) DUE	DATE DUE
nonprovisional	NO	\$1510	\$300	\$0	\$1810	09/23/2009

THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. PROSECUTION ON THE MERITS IS CLOSED. THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 1SI. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and 1/2 the ISSUE FEE shown above.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

IMPORTANT REMINDER: Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

PART B - FEE(S) TRANSMITTAL

Complete and send this form, together with applicable fee(s), to: Mail Mail Stop ISSUE FEE Commissioner for Patents P.O. Box 1450 Alexandria, Virginia 22313-1450

or Fax (571)-273-2885

INSTRUCTIONS: This form should be used for transmitting the ISSUE DEE and DURI ICATION DEE (if required). Blocks 1 through 5 should be completed where

appropriate. All further indicated unless corrects maintenance fee notifica	correspondence including ed below or directed out tions.	ng the Patent, advance of nerwise in Block 1, by (rders and notification of a) specifying a new corn	maintenance fees espondence address	will be ; and/o	mailed to the current r (b) indicating a sepa	correspondence addres arate "FEE ADDRESS"	
CURRENT CORRESPONDENCE ADDRESS (Note: Use Block 1 for any change of address)				Note: A certificate of mailing can only be used for domestic mailings of the Fee(s) Transmittal. This certificate cannot be used for any other accompanying papers. Each additional paper, such as an assignment or formal drawing, mus- have its own certificate of mailing or transmission.

Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)

(application filed on or after May 29, 2000)

The Patent Term Adjustment to date is 991 day(s). If the issue fee is paid on the date that is three months after the mailing date of this notice and the patent issues on the Tuesday before the date that is 28 weeks (six and a half months) after the mailing date of this notice, the Patent Term Adjustment will be 991 day(s).

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (http://pair.uspto.gov).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at 1-(888)-786-0101 or (571)-272-4200.

Application No. Applicant(s) 10/690 012 BLEUMER, GERRIT Notice of Allowability Examiner Art Unit JAMIE KUCAR 2621 -- The MAILING DATE of this communication appears on the cover sheet with the correspondence address--All claims being allowable, PROSECUTION ON THE MERITS IS (OR REMAINS) CLOSED in this application. If not included herewith (or previously mailed), a Notice of Allowance (PTOL-85) or other appropriate communication will be mailed in due course. THIS NOTICE OF ALLOWABILITY IS NOT A GRANT OF PATENT RIGHTS. This application is subject to withdrawal from issue at the initiative of the Office or upon petition by the applicant. See 37 CFR 1.313 and MPEP 1308. This communication is responsive to amendment and remarks filed 3/23/09. The allowed claim(s) is/are 20 and 23-25. 3. Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f). b) ☐ Some* c) ☐ None of the: a) 🔯 All 1. A Certified copies of the priority documents have been received. 2. Certified copies of the priority documents have been received in Application No. 3. Copies of the certified copies of the priority documents have been received in this national stage application from the International Bureau (PCT Rule 17.2(a)). * Certified copies not received: _____. Applicant has THREE MONTHS FROM THE "MAILING DATE" of this communication to file a reply complying with the requirements noted below. Failure to timely comply will result in ABANDONMENT of this application. THIS THREE-MONTH PERIOD IS NOT EXTENDABLE. 4. A SUBSTITUTE OATH OR DECLARATION must be submitted. Note the attached EXAMINER'S AMENDMENT or NOTICE OF INFORMAL PATENT APPLICATION (PTO-152) which gives reason(s) why the oath or declaration is deficient. CORRECTED DRAWINGS (as "replacement sheets") must be submitted. (a) Including changes required by the Notice of Draftsperson's Patent Drawing Review (PTO-948) attached 1) hereto or 2) to Paper No./Mail Date (b) X including changes required by the attached Examiner's Amendment / Comment or in the Office action of Paper No./Mail Date 20090612. Identifying indicia such as the application number (see 37 CFR 1.84(c)) should be written on the drawings in the front (not the back) of each sheet. Replacement sheet(s) should be labeled as such in the header according to 37 CFR 1.121(d). 6. DEPOSIT OF and/or INFORMATION about the deposit of BIOLOGICAL MATERIAL must be submitted. EXAMINER'S AMENDMENT

Acknowledgements

- Applicants' amendment filed March 23, 2009 is acknowledged.
- 2. This paper is assigned Paper No. 20090612 by the Examiner

Examiner's Amendment

- 3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to Applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.
- 4. Authorization for this examiner's amendment was given in a telephone interview with Steven Noll (USPTO Registration No. 28,982) on June 10, 2009. The text of claims 20 and 23-25 as amended below were also authorized via email by Mr. Noll on June 15, 2009.
- The application has been amended as follows:
 - A) Cancel non-allowable claims 1, 21, 22, and 26.
 - B) Amend claims 20 and 23-25 (renumbered claims 1-4) as follows:
 - 20. The method as claimed in claim 1 further comprising: A computed-implemented method for variably generating cryptographic securities for communications, involving a host device, comprising the steps of: cryptographically securing a communication for a first purpose using a first signature:

cryptographically securing a communication for a second purpose using a second signature;

in a processor, using a cryptographic algorithm of a first type to generate said first signature;

using a cryptographic algorithm of a second type in said processor to generate said second signature, said cryptographic algorithms of said first type and said second type, for a same input set, respectively generating different respective outputs from said processor;

entering an input set into said processor for a current communication

together with an entry designating whether said current

communication is for said first purpose or for said second purpose;

when said current communication is designated for said first purpose, operating on said input set in said processor for said current communication with said cryptographic algorithm of said first type to secure said current communication with said first signature and emitting said current communication secured with said first signature as a secured communication output from said processor.

when said current communication is designated for said second purpose, operating on the same input set in said processor for said current communication with said cryptographic algorithm of said second type to secure said current communication with said second signature and emitting said current

Application/Control Number: 10/690,012 Page 4
Art Unit: 3621 Paner No. 20090612

communication secured with said second signature as a secured communication output from said processor;

in a memory of a postal security device, storing a first program that, when executed, implements said cryptographic algorithm of said first type and providing storing a second program that, when executed, implements said cryptographic algorithm of said second type;

employing a hardware unit, outside of and in communication with said postal security device, as said processor;

when said current communication is designated for said first purpose, accessing said memory of said postal security device, from said hardware unit and executing said first program in said hardware unit to secure said communication for said first purpose with a first signature produced by said cryptographic algorithm of said first type; and

when said current communication is designated for said second purpose, accessing said second program said memory of said postal security device from said hardware unit and, in said hardware unit, executing said second program to secure said second communication for said second purpose with a signature generated by said cryptographic algorithm of said second type.

 The method as claimed in claim 21 further comprising: A computedimplemented method for variably generating cryptographic securities for communications, involving a host device, comprising the steps of: cryptographically securing a communication for a first purpose using a first signature;

cryptographically securing a communication for a second purpose using a second signature;

in a processor, using a cryptographic algorithm of a first type to generate said first signature;

using a cryptographic algorithm of a second type in said processor to generate said second signature, said cryptographic algorithms of said first type and said second type, for a same input set, respectively generating different respective outputs from said processor;

entering an input set into said processor for a current communication together with an entry designating whether said current communication is for said first purpose or for said second purpose;

when said current communication is designated for said first purpose, operating on said input set in said processor for said current communication with said cryptographic algorithm of said first type to secure said current communication with said first signature and emitting said current communication secured with said first signature as a secured communication output from said processor;

when said current communication is designated for said second purpose, operating on the same input set in said processor for said current communication with said cryptographic algorithm of said second type to secure said current Application/Control Number: 10/690,012 Page 6

Art Unit: 3621 Paper No. 20090612

communication with said second signature and emitting said current

communication secured with said second signature as a secured communication

output from said processor;

generating said first signature exclusively in a first logic circuit module that executes said cryptographic algorithm of said first type therein under control of a first implementation program; and

generating said second signature exclusively in a second logic circuit module by executing said cryptographic algorithm of said second type therein under control of a second implementation program;

storing said first and second implementation programs in a postal security device accessible by each of said first and second logic circuit modules;

accessing said first implementation program in said postal security device from said first logic circuit module when said current communication is designated for said first purpose; and

accessing said implementation program in said postal security device from said second logic circuit module when said current communication is designated for said second purpose.

24. The method as claimed in claim 21 wherein said host device contains a postal security device, and further comprising: A computed-implemented method for variably generating cryptographic securities for communications, involving a host device containing a postal security device, comprising the steps of:

cryptographically securing a communication for a first purpose using a first signature;

cryptographically securing a communication for a second purpose using a second signature;

in a processor, using a cryptographic algorithm of a first type to generate said first signature;

using a cryptographic algorithm of a second type in said processor to generate said second signature, said cryptographic algorithms of said first type and said second type, for a same input set, respectively generating different respective outputs from said processor;

entering an input set into said processor for a current communication together with an entry designating whether said current communication is for said first purpose or for said second purpose;

when said current communication is designated for said first purpose, operating on said input set in said processor for said current communication with said cryptographic algorithm of said first type to secure said current communication with said first signature and emitting said current communication secured with said first signature as a secured communication output from said processor;

when said current communication is designated for said second purpose, operating on the same input set in said processor for said current communication with said cryptographic algorithm of said second type to secure said current communication with said second signature and emitting said current communication secured with said second signature as a secured communication output from said processor;

generating said first signature exclusively in a first logic circuit module that executes said cryptographic algorithm of said first type therein under control of a first implementation program; and

generating said second signature exclusively in a second logic circuit module by executing said cryptographic algorithm of said second type therein under control of a second implementation program:

storing said first implementation program in a memory of said host device outside of said postal security device; and

storing said second implementation program in said memory of said host device outside of said postal security device;

accessing said first implementation program in said memory from said first logic circuit module when said current communication is for said first purpose; and

accessing said second implementation program in said memory from said second logic circuit module when said current communication is for said second purpose.

25. The method as claimed in claim 1 further comprising: A computedimplemented method for variably generating cryptographic securities for communications, involving a host device, comprising the steps of:

cryptographically securing a communication for a first purpose using a first signature;

cryptographically securing a communication for a second purpose using a second signature;

in a processor, using a cryptographic algorithm of a first type to generate said first signature;

using a cryptographic algorithm of a second type in said processor to generate said second signature, said cryptographic algorithms of said first type and said second type, for a same input set, respectively generating different respective outputs from said processor;

entering an input set into said processor for a current communication together with an entry designating whether said current communication is for said first purpose or for said second purpose;

when said current communication is designated for said first purpose, operating on said input set in said processor for said current communication with said cryptographic algorithm of said first type to secure said current communication with said first signature and emitting said current communication secured with said first signature as a secured communication output from said processor;

when said current communication is designated for said second purpose, operating on the same input set in said processor for said current communication with said cryptographic algorithm of said second type to secure said current Art Unit: 3621 Paper No. 20090612

communication with said second signature and emitting said current

communication secured with said second signature as a secured communication

output from said processor;

storing a plurality of algorithms selected from the group consisting of signing algorithms and hash algorithms in a read-only memory of a postal security device;

from a logic circuit module outside of said postal security device having access to said memory, accessing a selected one of said algorithms when said current communication is designated for said first purpose and using said selected one of said algorithms as said cryptographic algorithm of said first type in said logic circuit module to secure said communication for said first purpose; and

from said logic circuit module, accessing a selected different one of said algorithms from said read-only memory of said postal security device and, when said current communication is designated for said second purpose, securing said communication for said second purpose in said logic circuit module using said selected different one of said algorithm as said cryptographic algorithm of said second type.

6. Any comments considered necessary by Applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Application/Control Number: 10/690,012 Page 11

Art Unit: 3621 Paner No. 20090612

Drawings

7. New corrected drawings in compliance with 37 CFR 1.121(d) are required in this application because at least figure 3 includes a handwritten label (e.g. cryptoalgorithm 2). Applicant is advised to employ the services of a competent patent draftsperson outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.

Conclusion

- References considered pertinent to Applicant's disclosure are listed on form PTO-892.
 All references listed on form PTO-892 are cited in their entirety.
- Any inquiry concerning this communication or earlier communications from the
 examiner should be directed to Jamie Kucab whose telephone number is 571-270-3025. The
 examiner can normally be reached on Monday-Friday 9:30am-6:00pm EST.
- 10. If attempts to reach the Examiner by telephone are unsuccessful, the Examiner's supervisor, Andrew Fischer can be reached on 571-272-6779. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
- 11. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would
